6. Computed Tomography - CT

**X-Ray Unit**

- General Roentgenograms
- Fluoroscopy

**Mammography Unit**

*Used in the prevention and diagnosis of breast cancer*

- Mammograms
- Biopsies

**Computed Tomography Unit**

*Used to show anatomy in great detail*

- Neuro CT, Head CT, Angio CT and whole body CT, except interventional CT and cardiac CT

---

**Teleradiology**

The Radiology Department is proud to announce the addition of our Teleradiology service at PMH. The Teleradiology technology feature was introduced to the Unit in 2009.

Teleradiology is the transmission of radiological patient images such as x-rays, CTs, and MRIs, from one location to another for the purpose of interpretation and/or consultation. Teleradiology improves patient care by allowing Radiologist to provide services without actually having to be at the location of the patient. Teleradiology allows for trained specialist to be available 24/7.

Teleradiology utilizes standard network technologies such as the internet, telephone lines, wide area network (WAN) or over a local area network (LAN). Specialized software is used to transmit the images and enable the Radiologist to effectively analyze what can be hundreds of images for a given study. Through Teleradiology, images can be sent to another part of the hospital, or to other locations around the world.
